INDEX.

Ætna, Captain Smith's measurement of the height of, 408.
Alexander, Cornet, J. E. his account of a saline lake in Berar, 308.
Anderson, Mr, on the influence of the hygrometric state of the atmosphere on the minimum temperature of the night, 161.
Andes, on masses of iron found in the Eastern Cordilleras of the, 120.
Animals, British, Dr Fleming's remarks on the distribution of, 287.
Arsenic, Dr Christison on the detection of, in mixed fluids, 389.
Arts, Account of the Edinburgh School of, 203.
Astronomical observations of Dr Olbers, 304.
Atmosphere, Mr Anderson's remarks on the humidity of the, 161.
Avertebral animals, the existence of a nervous system in, denied, 419.

Baltic-Sea, observations with regard to the diminution of its level, 408.
Barlow, Mr, his account of magnetical experiments and discoveries, 65.
Birds, &c., on the preservation of, in cabinets, 415.
Bitumen in native sulphur, 411.
Blackadder, Henry Home, Esq., on the formation of dew, 51.
Botanical excursion to the Scottish mountains, 413.
Boué's arrangement of tertiary rocks, 216.
Boussingault, J. B., on several masses of iron found in the Andes, 120.
Bowdich, Mr, letter from, 380.
Bridge, wooden, at Montrose, Mr Buchanan's report on, 140, 267.
Brisbane, Sir T. his meteorological observations made at Paramatta, 119.
Brooke, H. J. Esq., his remarks on Mr Haidinger's paper on the sulphato-tri-carbonate of lead, 157.—remarks on Dr Brewster's reply to observations on the optical system of mineralogy, 187.
Buchanan, George, Esq., on the wooden-bridge at Montrose, and on the erecting of a suspended iron-bridge in its stead, 140, 267.

Cave, notice of one lately discovered near Killin, 215.
Celestial Phenomena, from July to October 1824, 207.
———— from October 1824 to January 1825, 402.
Celestine, Radiated, Dr Turner's analysis of, 329.
Cephalopoda, description of a particular organic system in them, 420.
Ceylon, Dr Gmelin's analysis of cinnamon-stone from, 129.
Charpentier, M. J. De, on the original form of the Pyrenees, 351.
Chick in ovo, Rev. Mr Ritchie's method of determining its sex, 263.
Christison, Dr, on the detection of minute quantities of arsenic, 389.
Cinnamon-stone, Dr Gmelin's Analysis of, 129.
Coal-gas, Dr Fyfe, on the comparative value of, 171, 367.
Coquimbo, Capt. Hall's account of the parallel roads in the valley of, 255.
Cotton-manufactures, extent and importance of, in Britain, 425.
Cotton-yarn, instance of its fineness, 423.
Crystallisations formed during metallurgical operations, 250.

Dempster, William, who swallowed a table-knife, account of, 319.
Dew, Mr Blackadder on the formation of, 51.
Don, Mr George, his account of several new species of plants, 342.

XUM

Dunmore Park, account of a fossil whale found there, 220.,—further particulars, 415.

Earth-worm, on its regeneration, 417.
Edinburgh, celestial phenomena, calculated for the meridian of, 207, 402.—account of rare minerals found in the neighbourhood of, 215. —Royal Botanic Garden, list of plants flowering in, 206, 401.—Royal Society, proceedings of, 209.—School of Arts, account of, 203.
Electrical theories, Professor Leslie's observations on, 1.
Elephant's tooth, fossil, found in Cheshire, 417,
Elm-trees in St James's and Hyde Parks, Mr Macleay's report on the state of the, 123.
Eudiometry, Dr Turner's experiments on the application of Professor Dobereiner's recent discovery to, 99, 311.
Experiments on the growth of pearls, 39.—magnetical, view of Mr Barlow's, 65.—Mr Scoresby's, 355.

Fabricius, Otto, biographical notice regarding, 223.
Ferussac's edition of the Epoques de la Nature, notice regarding, 215.
Fire, St Elm's, seen in Poland, 304.
Fleming, Dr, his remarks on the distribution of British animals, 287.
Friendly Societies, inquiry into the principles of, 169, 424.
Fyfe, Dr Andrew, on the comparative value of oil and coal gas, 171.
———— on the illuminating power of coal-gas and oil-gas, 367.
———— his description of a hydro-pneumatic lamp, 341.

Gas, Dr Fyfe, on the comparative value of oil and coal, 171, 367.
Gmelin, Dr, C. G. his analysis of pinite, 87,—of cinnamon-stone, 129,
Gour of India, Dr Traill's account of the, 334.
Graham, Dr, his lists of rare plants flowering in the Royal Botanic Garden of Edinburgh, 206. 401.
Grimsey, notice regarding the island of, 132.
Growth of Pearls, observations on the, 39.
Gymnotus electricus, Dr Knox's account of the structure of the electrical organs of the, 221.

Hailstones, remarkable, account of, 326.
Hall, Capt. Basil, on the parallel roads in the valley of Coquimbo, 255.
Heat, radiant, Mr Ritchie's experiments and observations on, 281.
Home, Sir E. his remarks on the structure of the seal and walrus, 219.
Hygrometric state of the atmosphere, Mr Anderson's remarks on the, 161.

Innes, Mr George, his calculations of celestial phenomena for the meridian of Edinburgh, 207, 402.
Iodine and phosphorus, remarks on, 217.
Iron, on several masses of, found in the Andes, 120.
Iron-Bridge, Mr Buchanan on the erection of a suspended one at Montrose, 140.
Jeffersonite, Dr Troost's remarks on, 411.
Jenite discovered in America, 412.

Kent, Mr T. on the extract of mimosa-bark for tanning, 266.
Koch, Mr Frederick, his account of crystallisations formed during metallurgical operations, 250.
Knife-eaters, Dr Barnes's account of, 319.

Lake of Loonar, Cornet J. E. Alexander's account of the, 308.

Lamont, A. Esq. his account of the capture of a colossal ray, 113.
Lamp, hydro-pneumatic, Dr Fyfe's description of one, 341.
Lead, Mr Brooke's remarks on Mr Haidinger's paper on the Sulphato-tri-carbonate of, 157.
Leslie, Professor, his observations on electrcal theories, 1.
———— his remarks on the light of the moon and planets, 393.
Letters from Dr Oudney, Mr Bowdich, and Captain Parry, 380.
Lightning, exemplification of its effects upon the human body, 305.
Lignite, account of its occurrence in coarse marl-limestone near Paris, 412.
Literary property, value of, in Scotland, forty years ago, 426.

Macleay, W. S. Esq. his report on the state of the trees in St James's and Hyde Parks, 123.
Maclureite, Mr Vanuxem's remarks on, 411.
Macquarrie Island, Mr Raine's notice regarding, 46.
Magnetical experiments and discoveries, view of Mr Barlow's, 65.
———— experiments by Mr Scoresby, 355.
Mallah of Miana, a venomous insect found in Persia, remarks on the, 418.
Manufacture of baize and flannel at Rochdale, 222.
Marobia, description of, 213.
Mars and Venus, on the spots of, 211.
Mediterranean, medium heat of the, 214.
Merricks, Mr, letter from, relative to the Arctic expeditio , 388.
Meteoric stones, 304.
Meteorological observations made at Paramatta, N. S. Wales, 119.
Mimosa-bark, Mr Kent on the use of its extract for tanning, 266.
Mineralogy, Mr Brooke's remarks on the optical system of, 187.
Montrose, on the present wooden bridge, and on the erecting a suspended iron-bridge at, 140.
Moon and Planets, Professor Leslie's remarks on their light, 293.
Mountain tallow, description of, 214.
Murray, Hugh. Esq. his observations on the results of Captain Parry's late expedition, 225.

Negro, on the colour of the skin in the, 219.
Nervous system, its existence denied in avertebral animals, 419.

Oil-gas, Dr Fyfe on the value of, compared with coal-gas, 171, 367.
Optic nerves, on their semidecussation, 420.
Optical system of mineralogy, Mr Brooke's remarks on, 187.
Oudney, Dr, letter from, 380.

Paramatta, meteorological observations made at, 119.
Party, account of a remarkable evening one at M. Arago's, 427.
Parry, Captain, observations on the results of his late expedition, 225.
—extract of a letter from, 388.
Patents granted in Scotland, list of, 224, 427.
Pearls, on the growth, structure, and colour of, 39.
Perkins' steam-engine, account of a paper upon, 211.
Phenomena, celestial, from July to October 1824, 207.—from October 1824 to January 1825, 402.
Pinite, Dr Gmelin's analysis of, 87.
Plants, luminous, notice regarding, 222.
——— Dr Graham's lists of rare, flowering in the Edinburgh Royal Botanic Garden, 206, 401.

XUM

Plants, two new species of, added to the British Flora, 413.
——— new or rare species of, described by Mr G. Don, 342.
Pompeii, medical remains found at, 423.
Prehnite found near Edinburgh, 215.
Prevost, notice regarding his journey to England, 216.
Pyrenees, M. Charpentier on the original form of the, 351.

Races of men, Spix and Martius's observations regarding, 217.
Ray, colossal, killed at Port Royal, Jamaica, 113.
Ritchie, Rev. Mr D. on ascertaining the sex of the chick in ovo, 263.
——— Mr W. his experiments on radiant heat, 281.
Rivero, Mariano de, on several massess of iron found in the Andes, 120.
Royal Society of Edinburgh, account of its proceedings, 209.

Salt formation above shell-limestone, 216.
Salt lake, Mr Alexander's account of one in Berar, 308.
School of arts, account of the Edinburgh, 203.
Schoun, Professor, on the geographical distribution of the vine, 360.
Scoresby, Mr W. *jun.* his magnetical experiments, 355.
Seal, Sir E. Home's remarks on the structure of its feet, 219.
Selenium discovered in Lipari Islands, 216.—further account of it, 411.
Serapis, on the geognostical phenomena at the temple of, 91.
Serpentine, remarks on the nature of, 412.
Societies, Friendly, notice of an inquiry into the principles of, 169.—further remarks on, 424.
Soda, on the native carbonate of, 215.
St Kilda, notice regarding the Isles of, 132.
Steam-engines, Perkins's account of a paper on, 211.
——— the extent to which they are employed in Britain, 425.
Sulphato-tri-carbonate of lead, Mr Brooke's remarks on a paper by Mr Haidinger on, 157.
Tallow, mountain, description of, 214.
Temple of Serapis, account of the geognostical phenomena at the, 91.
Theories, electrical, Professor Leslie's observations on, 1.
Theorem relating to regular polygons, Professor Wallace's, 377.
Thermo-magnetism, Dr Traill's experiments on, 258.
Tilesius, Dr, on the effects of lightning, 305.
Titanium in iron-slags, 410.
Traill, Dr Thomas Stewart, his experiments on thermo-magnetism, 258.—account of the Gour of India, 334.—of the trumpeter bird, 417.
Trumpeter-bird, Dr Traill's account of one, 417.
Turner, Dr E. his experiments on the application of Dœbereiner's discovery to eudiometry, 99, 311.—his analysis of radiated celestine, 329.
Venus and Mars, on their spots, 211.
Wallace, Prof. his general theorem relating to regular polygons, 377.
Walrus, Sir E. Home's dissection of one, 219.
Wernerian Natural History Society, proceedings of the, 210, 403.
Whale, curious fact regarding its habits, 220.—account of a fossil one discovered in Dunmore Park, 220.—further particulars, 415.
Whirlwind account of a remarkable one in France, 405.
Wooden bridge at Montrose, Mr Buchanan's report of its state, 140.

P. Neill, Printer.
